

Sales Performance & Business Insights Report

Prepared for Meridian Home Goods

A neighborhood retail store that sells furniture, office essentials, and compact technology accessories.

Total Revenue	Total Profit	Profit Margin	Orders	Avg Order Value
\$508,199	\$33,476	6.6%	938	\$541.79

Executive Summary

- Meridian Home Goods generated \$508,199 in revenue across 938 orders and \$33,476 in profit, leaving the business at 6.6% margin.
- Demand is clearly seasonal: March is the strongest month, while January is the weakest, so inventory and staffing should follow that rhythm.
- Premium Standing Desk leads revenue, while Smart LED Monitor leads profit. That split matters because the business is not simply winning on turnover; margin management still needs attention.
- The Central region is the most efficient market at 11.1% margin, while Furniture leads category revenue and Office Supplies leads category margin.
- Only 3 of 16 products drive 80% of revenue, which means the assortment is concentrated enough to reward tighter SKU management.

Revenue Trend

Peak month: 2025-03. The chart shows the year-end lift that Meridian Home Goods should staff and stock for.

Product Performance

Top revenue product: Premium Standing Desk; top profit product: Smart LED Monitor. 3 products are high-volume but low-margin, which makes discount control a profit lever.

Category and Regional Profitability

Highest category revenue comes from Furniture, while Central leads on margin.

Growth Opportunity Quadrant

The quadrant analysis shows 1 Double Down opportunities and 5 Fix Margin pockets. That distinction is the practical guide for next-month planning.

Anomalies and Margin Risk

- 2024-03: Sharp month-over-month change.
- 2024-11: Sharp month-over-month change.
- 2024-12: Large deviation from trend and sharp month-over-month change.
- 2025-01: Large deviation from trend and sharp month-over-month change.
- 2025-02: Sharp month-over-month change.
- 2025-03: Large deviation from trend and sharp month-over-month change.
- 2025-04: Large deviation from trend and sharp month-over-month change.
- 2025-05: Large deviation from trend and sharp month-over-month change.
- 2025-08: Large deviation from trend and sharp month-over-month change.
- 2025-09: Large deviation from trend.
- 2025-10: Sharp month-over-month change.

1 slow movers were identified for repricing or discontinuation review.

Pareto check: 3 products drive roughly 77.1% of revenue.

Actionable Recommendations

Tighten discounting where revenue is strong but margins are lagging

Review pricing and discounts in East / Furniture. That pocket generated \$83,701 in revenue but only -0.0% margin.

If that segment lifted margin to the portfolio median, annual profit would improve by roughly \$13,059.

Reduce discount leakage on the highest-volume low-margin product

Premium Standing Desk is producing \$148,615 in revenue but only 0.8% margin. Cap promo depth and test a smaller bundle incentive instead of broad discounting.

A 3-point margin lift on this product alone would add about \$4,458 in annual profit.

Scale the best-performing growth pocket

Increase local marketing and inventory priority in West / Technology. It combines \$62,240 of revenue with 17.9% margin.

A 10% revenue lift in this pocket would contribute about \$1,114 of additional profit at the current margin.

Deprioritize slow movers that tie up cash without creating profit

Modular Bookshelf sits in the low-revenue, low-profit bucket. Reprice it, replace it, or stop carrying excess stock.

Reducing inventory exposure on this item can free working capital and avoid roughly \$59.95 of annual profit drag.

Limitations & Next Steps

This analysis is based on sales orders only. To make the next planning cycle stronger, Meridian Home Goods should connect inventory, supplier cost, and marketing data so the team can compare revenue growth with true contribution margin.

If more data becomes available, the next analysis should isolate stockouts, customer retention, and channel-level acquisition cost.
